- Capacity measurement under following conditions:
 - i. Ambient temperature: 25 ~ 30°C (77 ~ 86°F)
 - ii. Initial battery temperature from BMS: 25 ~ 30°C (77 ~ 86°F)
 - iii. Current and voltage measurement at battery DC side

A reference for measuring capacity:

1. Set the battery priority mode through the APP to make the battery state of charge (SOC) up to 100%, and record the battery total discharge value displayed on the APP of that day.
2. Set only battery discharge (PV should not participate) through the APP and discharge the battery up to 10% SOC level (Avoid battery damage from a very low voltage). And record the day's total discharge of the battery displayed on the APP at this moment.
3. Subtract the total discharge value in Step 1 from the total discharge value in Step 2. Divide the result by 90% to get the current battery capacity.

Note: Hiconics provide the standard or performance warranty only, whichever comes first.
